Now available : Illuminated KR rocker series with different colours

2 marking processes are used for KR series:

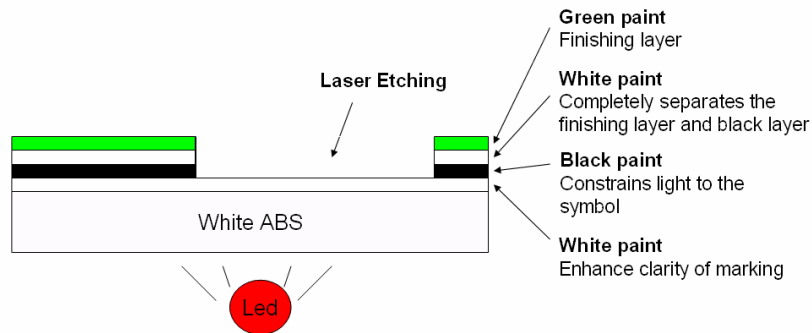

- pad printing for non-illuminated versions
- laser etching for illuminated versions

The marking process for coloured rockers was under development and was recently approved by our quality department for all colours except Ivory:

BLUE, DARK BLUE, BLACK, GREEN, GREY, RED, ORANGE, YELLOW

Suggestive end-user actuator price: 3,8 € (illuminated rocker) - 1000 pieces

The drawing explains the process (painting+marking): 4 paint layers are deposited in order to achieve a good rendering.

For the black color : only two layers (white and black)

Advantages of APEM choice:

- All symbols may be created
- No added lens: A very professional rendering and no removable part
- An end-user function may be associated with each colour (ie blue=flashing light)
- A larger surface dedicated to etching (not limited to the surface of a lens)
- Different Led colors
