Now available : IP with a flat plunger

The I range of pushbuttons keeps expanding. A new configuration has recently been added: models with a flat plunger.

This flat surface enables a hot-stamping process with a colored film for a specific customer logo (tool cost=100 €) This marking is more environmentally resistant than a pad-printing process.

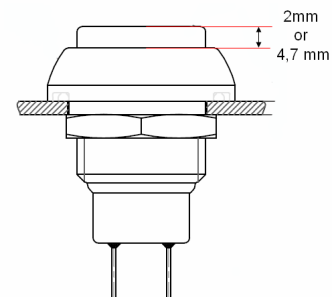

This model is available for round bezel, non-illuminated products in 2 plunger heights: 2 mm (standard) and 4,7 mm (as in the drawing opposite)

To order, please build a reference as follows:

IP P . . AD 104 for a 4,7 mm flat plunger

IP P . . AD for a 2,0 mm flat plunger

The dimension of the printed symbol is 10 mm maximum.

Advantages:

- new aesthetics
- can accept markings

This new version will be in the next edition of APEM Big Blue English Catalogue. For low depth installations, IB and IS series are also available with this flat plunger. On request.
