Now available: A9 series, a large mushroom head pushbutton switch

APEM UK introduces a new pushbutton with the biggest actuator of the APEM range. This product integrates an up-to-date design with smooth curves. The actuator has a diameter of 40 mm and mounts into a panel cut-out of 30 mm.

The **operator** is available in illuminated and non-illuminated versions, sealed up to IP65. The **switch block** is available in 1,2,3 or 4 poles with a latching or a momentary function.

Many colors can be chosen for the **screen** and for the **illumination**. APEM UK also offers Screen Engraving on request.

To perfectly complete this new series, an indicator version with the same case and design is also available.
