New intelligent devices from Arcoelectric. These drop-in electronic replacements for standard neon indicators will instantly add extra functionality.

Maintenance indicator 1430 Smart indicator series

- ▶ Monitors appliance usage
- ▶ Preventative maintenance reminder
- ▶ Direct replacement for Neon indicator
- ▶ Counts time that mains power is applied
- ▶ Remembers accumulated time even if power is switched off
- ▶ Connecting 'reset' terminal to Neutral resets timer to zero
- ▶ Blue LED indicates normal operation
- ▶ Flashing Red LED indicates service action is required
- ▶ Convenient snap-in design
- ▶ Fast-on terminals
- ▶ Bezel size 32 x 14mm

230Vac, 115Vac, 48V, 24V & 12V available.
Less than 1 watt (power consumption)

▶ APPLICATIONS

- ▶ Coffee machines – decalcification
- ▶ Deep fat fryer – oil change
- ▶ Air conditioning – filter change, bleaching
- ▶ Vacuum cleaner – filter cleaning
- ▶ Motorised equipment – preventative maintenance, lubrication, belt change
- ▶ Petrol/Diesel engine generator – engine service
- ▶ Central heating – gas appliance inspection
- ▶ Inspection/cleaning interval reminder – washrooms, kitchens
- ▶ Equipment calibration interval reminder
- ▶ Electrical safety check interval reminder

▶ OPERATION

The smart indicator operates like a standard neon indicator, giving visible status indication for the appliance or application. Normal operation will show continuous Blue LED illumination (contact factory for other colours).

When the accrued usage time exceeds the factory-set time limit, the LED illumination changes colour to Red (contact factory for other colours) and starts to flash on/off to attract user attention. The indicator will continue to flash on subsequent appliance use, until the maintenance operation is carried out and the reset procedure followed.

To reset the indicator after maintenance operations are completed, simply link terminal 2 to terminal 3 while the indicator is powered. This could be a key-operated switch or a service button within the appliance.

The service interval time is factory programmed, and can be any time period from as little as one minute, up to tens of years.

▶ CONNECTIONS

▶ PART NUMBER

1432AL

Specify Terminal Type: C, H, T, X
Specify Model Code: 1432AL

All dimensions in millimetres (mm)

▶ APPLICATIONS

- ▶ Deep freeze monitoring - visual check of correct temperature
- ▶ Cold storage monitor - visual check of correct temperature
- ▶ Refrigeration monitoring - visual check of correct temperature
- ▶ Chiller monitor - visual check of correct temperature
- ▶ Air conditioning - status indicator
- ▶ Equipment check - without having to know exact temperature

▶ INDICATIONS

Upper and lower temperature limits can be factory programmed to suit the application.

The smart indicator operates like a standard neon indicator, giving visible status indication for the appliance or application. Normal operation will show continuous Blue LED illumination (contact factory for other colours) while the monitored temperature is within the 'safe' range between lower and upper limits.

When the measured temperature falls outside of the 'safe' range, the LED illumination will start to flash or change colour. (contact factory for colour options).

Example temperatures (Freezer):

Above -14°C	Too warm (Flashing Red LED)
Between -14°C and -22°C	OK (Blue LED)
Below -22°C	Too cold (Flashing Blue LED)

Optional steady/flashing LED and colour combinations available – contact factory.

All dimensions in millimetres (mm)

▶ APPLICATIONS

- ▶ Limit switch detection and display – machine position
- ▶ Differential air pressure sensing - filter status indicator
- ▶ Latching and display of momentary sensor signals

▶ INDICATIONS

The smart indicator operates like a standard neon indicator, giving visible status indication for the application. Normal operation shows a continuous Green LED illumination (contact factory for other colours) while an error or fault condition results in a RED illumination. Fault condition indication can be factory configured as flashing.

Status indicators are commonly used on equipment and machinery to advise the operator that particular device conditions are normal, operational status is active or inactive, equipment is on-line or off-line. Various standard switches and sensors can be used to determine position, location, rotation speed, airflow, air pressure, vacuum level, interlock etc.

The indicators' sensing input provides a non-isolated DC voltage, current limited to 1mA, for detection of volt-free normally open or normally closed switch contacts, or open-collector type sensors.

Some switches can exhibit transient effects or require de-bounce functions, most of which can be masked by having a qualifying time period before the indication takes place. In some applications a hold-off delay could be useful to ignore any settling during initial operation, or indications may only be required after power-up and then latched. The indicator can be factory programmed to cater for many different requirements, please contact us with application details.

APPLICATIONS

- ▶ **Monitoring of two phases and Neutral**
- ▶ **Indication that the service is wired correctly**
- ▶ **Blown fuse indication – detects loss of one phase**
- ▶ **Power Distribution Units/Switchboards – Monitoring incoming supply**
- ▶ **Portable or Site equipment – Monitoring of temporary supply connections**

INDICATIONS

High-power loads such as cooking equipment, heaters, or air conditioning can be connected across two phases to operate at 208V or 240V. Some appliances require 120V phase/neutral and 208/240V phase/phase connections, and can be damaged if incorrectly connected. Often equipment can exhibit unusual behavior if one phase is lost (for example, due to a blown fuse).

The Smart Indicator connects directly to Neutral and the two phases, continuously monitoring the presence of all three conductors and ensuring that phase and neutral wires have not been wrongly connected. Faulty connections could result in 208 or 240 Volts being applied to 120V rated circuits, leading to equipment damage.

Only when the correct electrical connections are made will the Green LED illuminate, giving a clear indication of normal operation. Incorrect or missing connections will illuminate and flash the Red LED. Additionally, the loss of one phase connection will flash the Red LED, useful for indicating fuse failure.

The Smart indicator can replace any standard neon indicator, maintaining the minimal on/off indication that is usually found on equipment, whilst adding essential diagnostic display information for common problems such as incorrect or missing connections and blown fuses.

All dimensions in millimetres (mm)

▶ APPLICATIONS

- ▶ Monitoring of three phase, 3 or 4-wire supply systems
- ▶ Power Distribution Units/Switchboards – Monitoring incoming supply
- ▶ Portable or Site equipment – Monitoring of temporary supply connections
- ▶ Motorised equipment - monitoring correct direction of rotation
- ▶ Blown fuse indication – loss of one phase
- ▶ Motors - Single phasing indication

▶ INDICATIONS

The phase sequence is particularly important for all three-phase motorised machinery, since incorrect connections can result in motors rotating in the wrong direction, risking equipment damage or injury to personnel. Motors can continue to operate even if one phase is lost (for example, due to a blown fuse) but prolonged operation can result in damage.

The Smart Indicator connects directly to the three-phase supply, continuously monitoring the presence of all three phases and ensuring that the phase sequence is correct.

The proper phase sequence "ABC" will illuminate the Green LED, clearly indicating correct connections. A reversed sequence, such as "BAC" will illuminate and flash the Red LED. Additionally, the loss of one phase connection will flash the Red LED, useful for indicating fuse failure.

The Smart indicator can replace any standard neon indicator, maintaining the minimal on/off indication that is usually found on equipment, whilst adding essential diagnostic display information for common problems such as incorrect or missing connections.

Temperature Micro Logger 1430 Smart indicator series

- ▶ Intelligent temperature logger for refrigeration
- ▶ Wireless data communication
- ▶ Over 14,000 data readings stored
- ▶ Non-volatile memory
- ▶ Industry standard Thermistor supplied
- ▶ Configurable data log interval
- ▶ Monitors mains power interruptions
- ▶ Programmable upper/lower limit alarm
- ▶ Blue LED indicates normal operation
- ▶ Red LED indicates problem
- ▶ Snap-in mounting
- ▶ Bezel size 32mm x 14mm

100 to 230Vac $\pm 20\%$ 50/60Hz.
Less than 1 watt (power consumption)

UL Recognised

All dimensions in millimetres (mm)

▶ APPLICATIONS

- ▶ Refrigeration temperature monitoring for food safety compliance
- ▶ Deep freeze monitoring
- ▶ Cold storage monitor
- ▶ Chiller monitoring
- ▶ Process control temperature monitoring
- ▶ Visual checking of correct temperature
- ▶ Control system verification – independent monitoring of controller
- ▶ Power quality indication – records power interruptions
- ▶ Equipment status check - simple indicator lights

▶ INDICATIONS

An Intelligent temperature data logging device for refrigeration applications, ideal for monitoring that freezers and chillers are maintaining the required temperatures to comply with food safety guidelines.

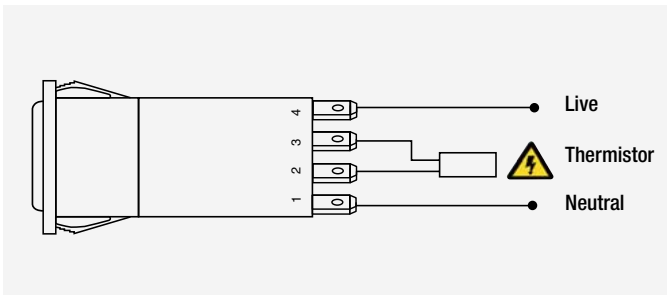

Designed to directly replace the standard neon indicator already fitted on many appliances, the front-panel mounted temperature logger operates like a standard neon indicator, giving visible status indication for the appliance or application. Normal operation will show continuous blue LED illumination (contact factory for other colours) while the monitored temperature is within the 'safe' range between lower and upper limits. The upper and lower temperature limits for alarm indication are fully user programmable.

The embedded microcontroller stores the temperature readings at regular intervals for retrieval and analysis. Over 14,000 readings can be stored in non-volatile memory (no battery is required). The data log interval is user configurable between 1 second and 12 hours. The logger also records the number of mains power interruptions. Stored data can be transferred to a collection device (PDA or Laptop) via a wireless infrared data link, a serial to infrared communication adapter is available as an accessory.

The device is provided with an industry standard Thermistor temperature sensor.

PC and PDA software can be downloaded from www.arcoelectric.co.uk/software

▶ CONNECTIONS

▶ PART NUMBERS

1435AL

Specify Terminal Type: C, H, T, X
Specify Model Code: 1435AL
Specify LED Colour: Red/Green, Red/Blue

▶ SOFTWARE

The PC software allows fast and simple configuration of the temperature micro logger device settings. The stored temperature data can be easily extracted using a serial port infrared data link.

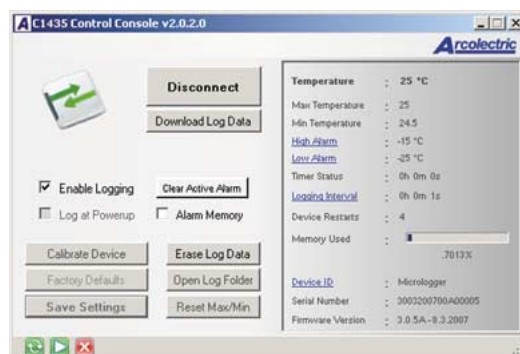

With a single button press, the 'Download log' feature imports the stored temperature reading data directly into an Excel spreadsheet for easy analysis and display.

The logging time interval can be set to suit the end application.

Low and high alarm setpoints can be fully configured for LED indication on the logger front panel. When the measured temperature is between the low and high limits, the Blue LED illuminates to indicate that the measured temperature is acceptable. When the measured temperature falls outside of low or high alarm setpoint, the LED illumination changes colour to Red. Additionally, if the alarm memory box is checked, the only way to clear a temperature alarm is to press the 'Alarm Clear' button.

The Logger status is continually updated while the infrared data link is active, and the current measured temperature is displayed in °C or °F.

Memory usage can also be monitored.

Compact Electronic Cooker Hood Controller

- ▶ Solid state electronic control module
- ▶ Microprocessor based
- ▶ Two-button operation
- ▶ Variable lamp brightness
- ▶ Lamp load up to 100W
- ▶ Variable fan speed
- ▶ Motor load up to 300W
- ▶ Status LED output
- ▶ Low standby power <1W
- ▶ Low profile module
- ▶ Open frame construction

230Vac, 115Vac

Less than 1 watt (standby power consumption)

CE Mark

RoHS compliant

USER INTERFACE

The board is supplied with two momentary push buttons already fitted, and is ready to install. The tactile buttons have a short-stroke, and can be directly operated by cosmetic front panel actuators or via springs and actuators while maintaining useful tactile click.

Each 'click' of the Lamp button adjusts the brightness, until 100% is achieved. By default the module provides 3 brightness levels.

Each 'click' of the Fan button adjusts the fan speed, starting at the lowest speed, speed can be increased in discrete steps until 100% is achieved. By default the module provides 5 fan speeds. When the fan is running, the LED is illuminated.

The remote user interface connector can be used to connect with remotely mounted control switches in place of using the on-board controls.

OPERATION

This intelligent cooker hood control uses solid-state electronics to operate the fan motor and the lamps. Designed as an OEM solution for hood manufacturers, the open frame construction has a low profile and can be easily integrated into existing hood designs. Digital microprocessor technology allows hood feature sets to be brought right up to date, providing many benefits that cannot be achieved with conventionally switched hood controls.

Most cooker hoods have a lamp and three fan speed settings, usually operated by slide switches or push buttons. While more than three fan speeds is desirable, having more than four or five buttons can be confusing. Simple appliances require that the fan motor has separate windings or taps for each speed selection, making the motor more bulky and expensive for more than three speeds.

The intelligent control uses only two momentary switch buttons, one for the fan and one for the lamp. Up to ten fan speeds settings are available using only a single winding fan motor; multi-tapped fan motors are not required as the speed is electronically controlled - each button press increases the speed.

The lamp brightness can be adjusted, allowing high intensity halogen lamps to be used whilst cooking, but reduced intensity for ambient lighting or to create a particular mood in a room. Each button press increases the lamp brightness, and the electronic 'soft start' feature can prolong the working life of halogen bulbs.

Connecting to the module is a very quick and simple process; multi-pole industry standard RAST5 connectors can be used.

SCHEMATIC

CONNECTIONS

The controller is available with a wide variety of power connection options for large volume orders. For the mains power connections, the board is compatible with industry standard RAST5 style connectors from many popular brands, which are generally available as two part plug/sockets, and also as single part board-edge connectors. Alternatively the board can be supplied with individual 6.3mm tab terminals for mains power connections. A list of compatible connector part numbers from is available on request. Please provide details on the preferred connector type and supplier at time of ordering.

If the on-board user interface buttons are not required, the remote user interface connector can be used to connect with remotely mounted control switches. This connector is RAST2.5 style, available from many popular brands as two part plug/sockets and board-edge connectors.
