Super-compact E-stop – without compromising safety

- unique design
- comfortable
- ergonomic style
- high quality

Further E-stop designs

Emergency stop switch

When safety becomes a matter of millimetres: No problem for the "E-Stop". These days, the space required to accommodate extensive functionality is ever decreasing. However, large switches often stand in the way of a more compact, lower-profile equipment design. The new, super-compact "E-Stop" now only requires an installation depth of 20mm allowing clearance for slimmer and more ergonomic designs without compromising safety. The optional LED illumination makes the "E-Stop" an ideal switch solution for a wide variety of applications.

Typical Segments

- Building Automation & Security
- Industrial Equipment & Automation

Typical Applications

- Elevators & Escalators
- Alarm systems & Call points
- Control panels
- Automatic assembly machines
