

NEWS ALERT

2 new products for Eurosatory 2012

This international land defence and security exhibition gave APEM the opportunity to complement their range of high performance switches designed for demanding defence applications.

13000X778 alternate

High performance pushbutton switches

- **High performance, compact size**

13000X778 alternate switches feature IP67 front panel sealing (2 O-rings) and epoxy sealed terminals. To minimize wear, the case, plunger and hardware are covered with a matt black finish. A double shell case increases mechanical strength.

Associating compact size and alternate function this pushbutton is a good alternative to toggles, which can prove difficult to integrate into the tight cockpits of light armoured vehicles.

3 pole E-Stop

Heavy-duty emergency stop

- **Enhanced safety**

With the 3-pole version, an additional level of safety is provided by the ES heavy-duty E-Stop.

The third information circuit (NO contact) is used to check the switch correct operation. This feedback is absolutely necessary to soldiers facing critical situations.
