

## Interface with the D2RS

Durakool introduces NEW D2RS Interface Relay, ideal for control panels in HVAC (Heating, Ventilation & Air Conditioning) and BEMS (Building Energy Management Systems) environments.

John Merrill, Relays Product Manager at Willow commented “In addition to this 5A 220VAC DPDT Contact Configuration, Durakool has also introduced a 5A 220 VDC special version of this Interface Relay for high voltage DC applications including Solar Panels and Photovoltaic systems.”

The slim line DIN Rail Mounting D2RS package, suitable for industry standard mounting in control panels uses less space on the DIN rail than traditional relays. It features robust blade terminals for easy insertion into sockets and good quality connections in the socket. The locking test lever makes for easy control panel testing and set up, whilst the LED & mechanical indicators supply visual indication of contact operation and coil energising, for easy fault detection.

“The 5A DPCO & 16A SPCO contact configurations available with the D2RS suit all common applications and replace larger DPCO relays. Durakool continue to offer high quality industry solutions,” Continued Merrill.
