

NEWS ALERT

FD series, double icon illuminated pushbutton switches

APEM introduces its latest innovation: double icon illuminated pushbutton switches.

The combination of attractive design...

- Quality of screen printed legends
- Uniform luminosity without hot spot
- Large size, snap-in and threaded bushing versions

... & robustness

- Sealing up to IP69K
- Resistance to shocks and vibrations

With two different legends on a single switch, the FD series is ideally suited for integrated designs where additional switches or indicators are no longer necessary.

Innovative technology

Designed like a traditional pushbutton, the FD series integrates a technology of superposed filters reacting to green and red light only. This technology allows the display of two different legends depending on the illumination color.

Three standard legends are available. Additional legends can be achieved on request.
