

Ledex® Low Profile Linear Solenoids

Ledex® Low Profile Solenoids

- Linear actuation
- Space-saving, low-profile configuration
- Ideal for high force, short stroke applications
- Forces to 845 N
- Stroke lengths to 18 mm

All catalogue products manufactured after April 1, 2006 are RoHS Compliant

The low profile shape, besides contributing to smaller size, optimises the magnetic flux paths for maximum force versus stroke characteristics. The construction of the plunger assembly provides an auxiliary flux path which permits a significant increase in force. The low profile solenoid construction not only provides long life, but also provides a rugged design for both military and commercial applications.

Conical Face vs. Flat Face Plunger Design

Conical-faced designs extend the useful range of a solenoid to provide higher forces for strokes typically over 1.5 mm.

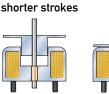

The pole surface area is greater and the distance between the tapered cone faces is approximately one-half that of the gap between the land faces (for 30° angles), providing the effect of a closer air gap.

While some of the force component is lost because the force vector is not parallel with the plunger motion, the shorter gap and higher flux density combine to provide more output force for longer strokes.

For shorter strokes, the magnetic flux density increases and causes the iron to saturate rapidly as the poles move closer, thus reducing the efficiency of the conical-faced design. At this point, the flat-faced plunger is more efficient.

The main advantage of the flat-faced pole over the conical is that the full component of force is usable because the force vector is parallel with the pole motion.

Flat Face: Higher efficiency for Conical Face: Higher force for shorter strokes longer strokes

De-Energised

De-Energised

Applications

The reliability and high performance of Low Profile solenoids make them an ideal choice for applications in which consistent, reliable operation is critical.

- Pumps
- Machine tools
- Packaging machines
- Cranes
- Instruments
- Flow controls
- Trucks and buses
- Computer peripherals

Ledex® **Low Profile** Solenoids

Why Low Profile solenoids provide such high force and rapid response.

A key to the efficiency and compact form factor of the low profile solenoid is our special precision coil-winding process. With maximum copper packed into the allowable space, each solenoid develops tremendous force for its size and power input. The low profile form, in addition to contributing to smaller size, permits maximum pole face surface area for the magnetic flux.

Another factor that contributes to high efficiency is the additional iron surface on the external portion of the plunger; it provides an auxiliary flux path and a significant increase in force.

The force is also affected by other interrelated features, such as the length of the iron path, the magnetic saturation properties of the solenoid case and plunger, and the area and shape of the pole pieces.

The enclosed construction of the solenoid not only provides an iron path with minimum losses at the ring gap, but also provides a rugged design for critical environment applications

Performance Curves

The performance curves in this section serve as guides to determine the solenoid size needed to produce a desired force at a given stroke, duty cycle, and power source. All curves were developed under the following standard test conditions: ambient temperature of 20°C, 65% relative humidity.

Starting Force

When determining an application's force requirement, apply a 1.5 safety factor. For example: a load requiring 1.0 N of force should utilise a solenoid providing 1.0 N x 1.5 or 1.5 N of force.

Duty Cycle

Duty cycle is determined by: ON time/(ON + OFF time).

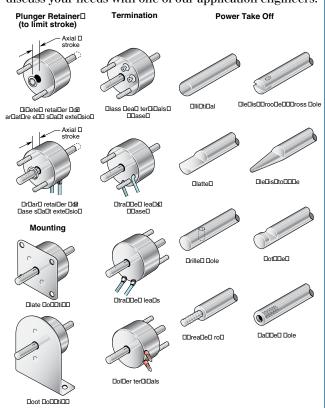

For example: a solenoid is actuated for 30 seconds, then off for 90 seconds. $30 \sec ON / (30 \sec ON + 90 \sec OFF) = 30/120 = 1/4 \text{ or } 25\% \text{ duty cycle.}$

Ledex Low Profile solenoids are rated for various duty cycles ranging from continuous to 10% duty.

Note that maximum ON time for a particular application can be a factor which overrides the duty cycle rating. For example, at 25% duty cycle, the maximum ON time for a given Ledex solenoid is 36 seconds. If, however, the solenoid is operated at a cycle rate which enables the unit to return to ambient temperature between ON cycles, then the maximum ON time is extended somewhat. In the above example, this extended ON time is 44 seconds. Maximum ON time ratings are listed on the individual model specification pages.

Typical Examples of Custom Features

Even though many solenoid designs are in stock, our customers often require a product with unique features or performance capabilities. So, if you don't find what you're looking for in the catalogue, give us a call to discuss your needs with one of our application engineers.

Life

When selecting a Low Profile solenoid, as with any other solenoid style, it is important to consider factors that will affect the life of the unit. Heat, side-loading, stroke and operating environment all play an important role in determining the life you can expect in your application.

A simple, yet often overlooked method to improve Low Profile solenoid life is to minimise the side load. Maximum life can be achieved by mounting Low Profile solenoids so that the shaft travels along a vertical plane. Keeping the stroke as short as possible will also improve life.

Power Requirements

Voltage applied to the solenoid must be matched to the coil wire size for proper operation. Solenoids are catalogueed in coil awgs ranging from #23 up to #38 to accommodate your input power. Refer to the individual model specification pages for coil wire awg recommendations. Many other coil awg sizes are available. Please feel free to contact our application engineering department for availability.

Low Profile solenoids are available in nine sizes. Use the selection chart to determine which size offers the desired performance and mechanical specifications. Refer to the individual size specification pages for complete performance and mechanical data.

Well-suited for battery operation. See the "Battery Operated Solenoids" section for complete information.

All catalogue products manufactured after April 1, 2006 are RoHS Compliant

Low Profile Selection Overview

	Package Dimensions (mm)		Max Stroke	Nominal Stroke

8ECM	85.7	55.0	17.78	7.6	120.2	231.4	400.5	645.2	

All data is at 20°C coil temperature. Force outputs degrade with elevated temperatures.

How to Use Low Profile Performance Charts

- 1. Select one of the four columns which provides the appropriate duty cycle. (For example 50%.) -
- 2. Reading down this column provides a variety of performance and electrical data including maximum on time, watts, and amp turns.
- 3. Following down the column further into the VDC ratings, select the voltage which most closely matches your supply voltage. (For example, 8.9 for a 9 VDC power supply.)
- 4. Read across (to the left) to select the awg suffix to complete the part number when ordering. (In this example using our OEC chart, 32 awg is required, thus to order, specify: 282340-032. - - -

- ² Single pulse at stated watts (with coil at ambient room temperature 20°C)
- 3 Other coil awg sizes available please consult factory
- 4 Reference number of turns

Specifications

Dielectric Strength 23 awg, 1000 VRMS ; 24-33 awg, 1200

VRMS

Recommended Maximum watts dissipated by Minimum Heat Sink solenoid are based on an unrestricted

flow of air at 20°C, with solenoid mounted on the equivalent of an aluminium plate measuring 191 mm

square by 3.2 mm thick

Coil Resistance 23-33 awg, ±5%

Weight 255 g

Holding Force 258.0 N @ 105°C Dimensions See page G17

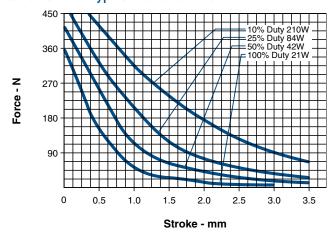

How to Order

Add the coil awg number (0XX) to the part number (for example: to order a 25% duty cycle unit rated at 30 VDC, specify 282349-027).

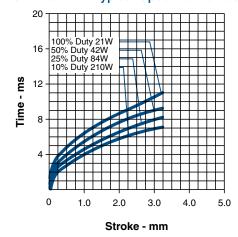

Please see www.ledex.com (click on Stock Products tab) for our list of stock products available through our distributors.
