Blind Hollow Shaft - Incremental Optical Encoder

PRECILEC optical incremental encoders are designed for accurately measuring speed and position of rotating shafts in industrial environment: machine tools, motor drives ...

They use a differential optical measurement and a ratio-metric processing of the signal for minimizing the temperature and photodiode aging effects.

Their universal complementary push-pull output interface and their large supply voltage range make them very easy to connect to most of electronic control units with high noise immunity.

Main features

- Shaft type: Blind hollow shaft $\varnothing 6$ mm with reduction ring in aluminium
- Housing diameter: 58 mm
- Fixation: Spring plate with 3 fixation arms
- Body - Cover: Aluminium – Zamac
- Shaft: Stainless steel
- Pulses per turn: Up to 10.000 ppr
- Output signals: A & B with gated Z
- Connections: Radial cable or M23
- Operating temperature range: - 30°C / + 100°C (standard resolutions) / - 20°C / + 80°C (specific resolutions)
